Denzel Joshua Moffat

Harare, Zimbabwe

Phone: 0788237076 | **Email:** joshuadm132@gmail.com

Portfolio: joshuadm132-creator.github.io | **GitHub:** github.com/joshuadm132-creator

---

Professional Summary

Motivated **Computer Science student** specializing in **Cyber Security and Data Science**. Proficient in Python, JavaScript, and C++, with experience building automation tools, interactive applications, and data-driven solutions.

Strong understanding of industry standards (ACM/IEEE), risk management, and professional practices. A proactive learner with leadership experience and a proven ability to collaborate in fast-paced, team-oriented environments.

Technical Skills

- **Programming Languages:** Python, JavaScript (ES6+), C++
- **Data & AI:** Web Scraping, Data Processing & Visualization, NLP (NLTK/Regex), Computer Vision (FaceMesh)
- **Cyber Security:** Risk Management, Ethical Computing, Security Principles
- **Web Development:** Node.js, Express, EJS, HTML5, CSS3, p5.js
- **Tools & Technologies:** Git/GitHub, VS Code, JUCE Framework, Linux environments
- **Core Competencies:** OOP, Automation Scripting, Agile/Scrum/Kanban Methodologies

---

Technical Projects

Weather Data Analysis Toolkit (C++)

- Engineered an Object-Oriented system for time-series data filtering and candlestick visualization.
- Optimized performance by implementing a CSV parsing logic that loads only filtered datasets, reducing memory overhead.
- Developed a custom text-based plotting engine and a rolling-average algorithm for trend prediction.

Music Recommendation Chatbot (Python, NLP)

- Developed a chatbot utilizing NLP preprocessing (tokenization, stemming, and lemmatization) to handle varied user inputs.
- Integrated regex-based intent matching to deliver personalized genre-based recommendations and streaming suggestions.

Computer Vision Face Detection App (JavaScript, p5.js)

- Architected a real-time face detection application utilizing FaceMesh for facial landmark tracking.
- Applied dynamic visual filters and integrated browser-based rendering for an interactive user experience.

Audio-Reactive Flocking Visualizer (JavaScript, p5.js)

- Developed a visualizer implementing Boids flocking behaviors (alignment, cohesion, and separation) influenced by audio frequencies.
- Built a custom UI and file-loading system using `p5.dom` to allow users to play and visualize local audio files.

C++ DJ Music Application (JUCE Framework)

- Built a multi-deck DJ system supporting simultaneous audio playback and real-time track blending.
- Implemented a sophisticated audio pipeline using `MixerAudioSource` for seamless transitions.

Education

BSc Computer Science (Cyber Security & Data Science) | *2024 – 2027*

University of London (Goldsmiths)

A-Levels | *2023*

Golden Springs, Harare

- Achieved **13 points**.

O-Levels | *2021*

Westminster International School, Harare

- Achieved **9 As**.

Professional & Soft Skills

- **Technical Communication:** Skilled in conveying complex concepts to both technical and non-technical stakeholders.
- **Project Management:** Familiar with Agile, Scrum, and Kanban methodologies for efficient team collaboration.
- **Problem Solving:** Strong analytical abilities with a focus on ethical and inclusive system design.
- **Initiative:** Proven capacity to take leadership roles and adapt quickly to new technologies.

Professional & Soft Skills

- Strong verbal and written communication (technical & non-technical)
- Teamwork and collaboration in diverse environments
- Leadership and initiative
- Time management and organisation
- Adaptability and fast learning
- Critical thinking and creative problem-solving
- Professional awareness of ethics, inclusivity, and sustainability in computing
